

# 7 Seals

The 7 Seals of a humble soul are a set of digital files which possess a unique computational signature known in the computer world as a hash. The 7 unique seal hashes that correspond to a unique digital file or seal name are meant to be used in the event something needs to be verified as being true and authentic from a humble soul while still maintaining animosity. Once a seal is broken it will be replaced with a new one always maintaining a set of 7 seal hashes.

| Seal Name | Seal Hash  |
|-----------|--|
| 01.JPG    | 8cada5f57d6e5bbc0c8133d9d19b677326dd0b91bb73c1bb232f009f4cd40b7f |

In the event this humble soul ever needs to authenticate something. Then this something along with the seal file that matches the previously made available public seal hash and seal name will be posted at:

<https://www.iamahumblesoul.org/brokenseal>

This information may also be shared with our organizations attorneys and made available to all members of the I Am Foundation.

### **How to verify the seal file against the publicly posed seal hash?**

Please go to <https://www.iamahumblesoul.org/howto> for instructions on how to accomplish this.

### **Sanity check**

It is important to maintain the original public facing values of the 7 seals as accurate at time of publishing. Websites can be hacked and redirected, potentially misleading and redirecting someone to a fake. For this reason we are offering a downloadable PDF version of this page that has the proper hash values. Further a tool such as the Way Back Machine which archives world wide web content can be used to verify the originally published seal hashes located here <https://web.archive.org/web/iamahumblesoul.org>

### **Why this method?**

The probability of two different image files having the exact same SHA-256 hash is extraordinarily low, rendering it practically impossible for all real-world scenarios.

SHA-256 produces a 256-bit hash, meaning there are 2 to the 256th power possible unique hash values. This number is astronomically large, how large some may ask, well 78 digits long to be exact.

### **For two specific, different image files:**

The probability of two separate image files producing the same SHA-256 hash is  $1/2$  to the 256th power. This is an incredibly small number, far beyond what can be practically encountered or observed.

### **Considering the “Birthday Paradox”:**

Even with the “Birthday Paradox,” which states that in a sufficiently large set of items, the probability of two items sharing a specific property increases significantly, finding a SHA-256 collision remains practically impossible. To have a 50% chance of finding a collision, one would need to generate approximately 2 to the 128th power of different files. This number is still astronomically large and far beyond the computational capabilities of humanity. Considering these are images many other variable factors such as size, compression and saturation are a big influence in the outcome.

### **In summary:**

While mathematically possible, the probability of two different image files having the same SHA-256 hash is so infinitesimally small that it is considered a non-concern for practical applications. If a SHA-256 collision were to be found, it would indicate a severe flaw in the algorithm and would have significant implications for cybersecurity. Therefore one who holds these files has the only key to the hashes. So if a seal is ever broken one can be very certain it is the truth for the source in this case the source being this humble soul.

### **Storage of the 7 Seals**

For those that possess many computer skills I wish to inform you that the 7 Seals are not stored on anything connected to the internet and they will never be stored on anything that is ever connected to the internet.

### **Why is animosity so important?**

Through my journey I learned that a big part of cultivating humility is animosity. I do what I love for the sake and joy of one's heart and not for the pure accolades typically associated with such actions. I also learned that it takes a team to accomplish great things. And unwanted attention creates distractions. Distractions can be viewed as weeds in a garden, they start small and eventually take over if not maintained. I wish to keep my garden just that, mine and as weed free as possible. Therefore sacred to me and my sacred space. Invasion of my sacred space is going against one's will which carries with it consequences far beyond the conception of any mortal mind.
